Create a URL-based test

Basics | Test plan | Parameters | Load | Monitoring

Requests

Enter the request details that you want to test. You can add up to 15

+ Add request

Name

Add requests to the test.

Input data files

Upload the input data files in CSV format with ',' as the delimiter. The separated variable names below instead of using a header row. You ca $(ColumnName).

Choose files — Select a file

Previous | Next | Review + create

Add request

Enter the request details like URL, method, headers and body or add a cURL command. You can add up to 20 headers. Extract data into response variables to use in any subsequent requests as $(VariableName). Learn more

Request format * — Add input in UI / Add cURL command

Request name * — Request1

URL * — Enter the complete HTTP URL

E.g. https://azure.microsoft.com

HTTP method * — GET

Query parameters | Headers | Response variables

Name	Value	URL Encode?
Enter name	Enter value	☐

Copy as cURL
